

### Legend

#### Fire Environment (FEN) 4 levels

|                  |  |
|------------------|--|
| <b>Minimal</b>   | - The Overall Fire Environment suggests a very low risk for Large fires ( <b>less than 1% chance</b> )   |
| <b>Normal</b>    | - The Overall Fire Environment suggests a <u>normal</u> risk for large fires ( <b>1 - 4% chance</b> )  |
| <b>Elevated</b>  | - The Overall Fire Environment suggests a moderately high risk for large fires ( <b>5 - 19% chance</b> )   |
| <b>High Risk</b> | The risk for large fire(s) is very high ( <b>≥ 20%</b> )<br>Triggers: 1. <b>✓</b> (Significant Lightning)<br>2. <b>BEN</b> (Critical Burn Environment) |

The assessment of the overall fire environment considers multiple factors including weather, lightning amount and fuel dryness. Large Fire probabilities are derived objectively via statistical methods. **High Risk** levels (≥ 20% probability of a large fire) are almost always due to significant lightning as burning conditions alone rarely result in a large fire probability much above about 10%.

## Pacific Northwest 7 Day Significant Fire Potential

| NW11  |     |       |     |     |     |     |     |     |
| NW12  |     |       |     |     |     |     |     |     |

**Fire Weather:** Afternoon showers and wet thundershower will continue today and Tuesday mainly from the Cascade Crest eastward. Otherwise dry weather is expected with no unusual general winds for the next few days.

For the weather details in your area see your NWS fire weather planning forecasts.

**Fire Potential:** ERC continues an upward trend. By the end of the work week ERC appears high enough to push some PSAs east of the Cascades toward the brown significant fire risk category. Lightning strikes over the next few days don't appear numerous enough to boost significant fire risk.
